Public economics is the study of government policies. It analyzes the effects of those policies on economic activities and the political processes by which those policies come to be in place. Public Finance studies the subset of public policies that are fiscal in nature. These include government taxation, debt, and expenditures. Modern democratic governments directly control more than a third of their gross national products and influence much of the rest through their fiscal and regulatory policies. The aim of this course is to provide students with the microeconomic tools to understand the impacts of those fiscal policies. Students will also use models and concepts from microeconomics to analyze the political pressures that generate a nation's fiscal policies.
